

Guy Wire

by TTF POWER TECHNOLOGY CO.,LTD

Catalog ID: GW001

Guy wire, also known as stay wire and a messenger wire, is used on the overhead line construction purposes. The guy wire is assembled with a guy thimble, pole bracket, stay rod, and a turnbuckle stay set for performance. These accessories needed for the execution are with an aim to stabilize the pole and the rest of the conductors for optimum performance.

TTF POWER stay wires conductors are manufactured in the most appropriate manner that withstands the ongoing environmental stress that can come up with installation and other things. Few wires come with the galvanized ones to ensure nothing goes wrong when it comes to performance.

In the circular space, there is no room left for any joint, splice, or weld. This maximizes the longevity of the guy wire or the stay wire. This ultimately boosts its performance.

Open heart procedure, also known as electric furnace, or basic oxygen is used to ensure the quality is maximum and there is Zinc coated one. Moreover, the uniform quality set according to the standards has optimized the performance of the product to set the pace. You can get the work prescription and details with the idea ASTM has provided the customers with.

PRODUCTS DETAILS

=

Main Dimension(mm)

Number of wires	7/2.03
Inch	1/4
diameter (mm)	6.35 mm
EHS Grade (kN)	29.58 mm
Approx weight (kg/km)	181
