

Stay Rod with Stay Bow Assembly

by TTF POWER TECHNOLOGY CO.,LTD

Catalog ID: SRSBA002

This stay rod is used for connecting the stay wire to the ground anchor. It is also known as the stay set. It ensures that the wire is firmly rooted to the ground and everything remains stable.

There are two types of these stay rods that you will find in the market. These are the bow stay rod and the tubular stay rod. The difference between these two types of power line accessories is based on their designs.

Tubular stay rod is adjustable through its turnbuckle. On the other hand, bow type stay rod is further divided into different categories which include stay thimble, stay rod and stay plate.

When it comes to the material of make, stay rods are made of high-grade galvanized stainless steel. We prefer this material due to its immense physical strength. The stay rod also has a high tensile strength which keeps it intact from mechanical forces.

The steel is galvanized hence is free from rust and corrosion. The pole line accessory cannot be damaged by various elements.

For the sizes, our stay rods come in different sizes. While buying, you should specify the size of these electrical pole accessories that you want. The line hardware should fit perfectly on your power line.

Dimensions

A	35 mm
B	18 mm
C	2440 mm
D	321 mm
E	25 mm
H	405 mm
L	230 mm
U.T.S (Kn)	65 Kn
Weight	7.9 kg
